

## System Integration

Almost without exception every ECM system that iiCon has implemented has required some form of integration with the client's line of business applications, accounting systems, ERP, CRM etc. iiCon has an in-house development team that has MS.NET, C++, VB, Java and Oracle skills to help you leverage the investment that you have made in your line of business applications by integrating them with the ECM/BPM environment.

iiCon has also developed a number of tried and tested "off-the-shelf" integration tools that greatly reduce the development timescales, costs and risks. Our services include;

- Definition of integration requirements
- Review integration options
- Gap analysis
- System specification for integration
- Development and unit testing
- System testing

Further information about system integration and other services.
